

A Synbiosis apresenta o mais novo equipamento de contagem automática de colônias **Protos3** com identificação cromogênica.

Esse equipamento, além de contar as colônias, identifica automaticamente as espécies de micróbios com base na cor das placas cromogênicas.

## Protos 3

Protos 3 is suitable for:

- One click, automated colony counting
- Medium throughput analysis of 75 plates in 5 minutes
- Food and environmental microbiology labs
- Multiple colony counting and microbial identification functions
- Reproducible results
- True colour recognition using unique three colour lighting
- Classifying colonies by size, colour and shape
- GLP compliance and full traceability

NOVIDADE

### Wide range of applications

- Pour plates
- Spiral plates
- Gridded plates
- Streak plates
- Species identification
- Large plates (up to 150mm)
- Dilution series plates
- For customers with GFP applications, Syngene (our sister company) has the complete solution
