

Equipamento desenvolvido pela Med Associates para estudos comportamentais relacionados a preferência de lugar (**Conditioned Place Preference**). O sistema possui três compartimentos e portas automáticas com guilhotina e luzes para **ratos** e **camundongos**

Principais Características:

- Center grey compartment is designed to provide a neutral starting position from which the animal can choose to enter either the white or black chamber.
- Automatic guillotine doors on either side of the center compartment allow doors to be opened simultaneously to both the black and white chambers.
- Animal position is tracked by IR photobeam detectors eliminating issues found with video tracking methods such as varying light levels or obstructed views of the animal.
- Different floor types provide additional context change from side to side.
- A maximum of eight chambers may be operated from one computer (computer not included).
