

Apenas 5 minutos para analisar toda uma placa de 384 wells contendo os tumores esferoides. Acompanhe o crescimento fazendo análises diárias.

Celigo Image Cytometer for Imaging and Quantification of 3D Multicellular Tumor Spheroids

In 5 minutes, scan an entire U-bottom ULA 384-well plate containing tumor spheroids.

Scan the same plate over multiple days to monitor spheroid growth over time.

Single spheroids formed in the 384- and 96-well Nexcelom^{3D} Ultra-low attachment round bottom plates.

Spheroids were imaged, automatically analyzed and diameters reported over multiple days.
