

Amerex: Modernidade e segurança estão em primeiro lugar.

PORTABLE TOP-LOADING AUTOCLAVES AND STERILIZERS

Amerex offers more than a dozen autoclave models to meet the sterilization needs of most biological research laboratories. They are fully automatic, stand-alone, microprocessor-controlled, programmable, self-contained systems. All models incorporate a built-in steam generator and plug into a standard 120VAC (or 220VAC) power outlet, thereby eliminating costly set-up charges. Water for steam generation is poured directly into the chamber. After sterilization, steam is vented automatically into a plastic bottle in front of the autoclave. A warming cycle keeps sterilized agar from solidifying and also can be used for melting sterilized agar.
