

A Noldus apresenta mais estes lançamentos para pesquisa em comportamento animal:

- **UltraVox XT** → Receptor e microfone para captação de ultrasons de animais
- **ErasmusLadder** → Monitoramento de performance e aprendizado motor em camundongo

UltraVox XT

We are wrapping up this year's developments with the new UltraVox XT. Version 3 is a compact and cost-effective system to record and analyze ultrasonic calls and other vocalizations. It captures the full spectrum of sound with just one plug-and-play microphone. You can inspect the sound in detail using waveforms and spectrograms. Then easily find specific calls, label them, and analyze your findings! Export your results to combine them with other behavioral data for a better understanding of animal behavior. Available now!

ErasmusLadder

ErasmusLadder is an innovative system with touch-sensitive rungs to measure motor performance and (associative) motor learning in mice. Now available to all labs, and already validated in many studies!

Contate-nos que teremos prazer em lhe apresentar mais estas novidades!
