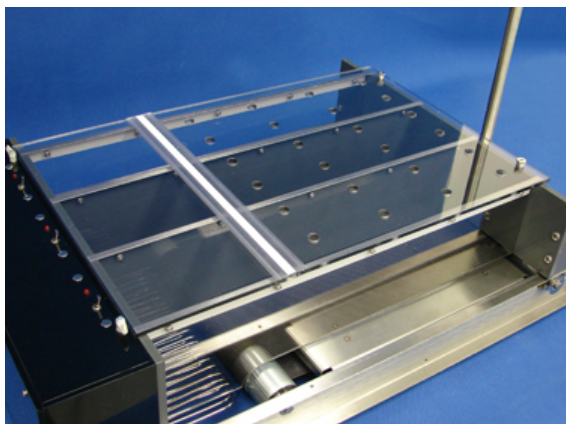
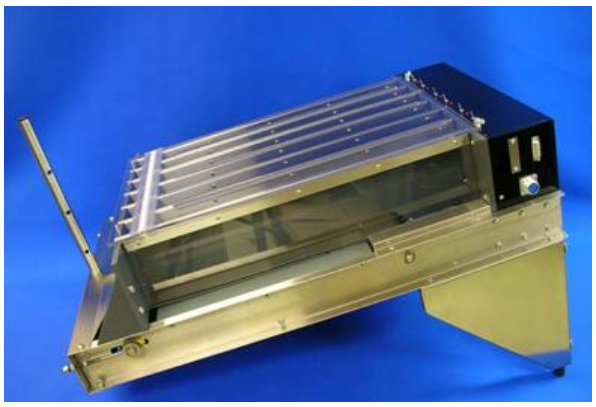
Esteira Ergométrica para Ratos e Camundongos

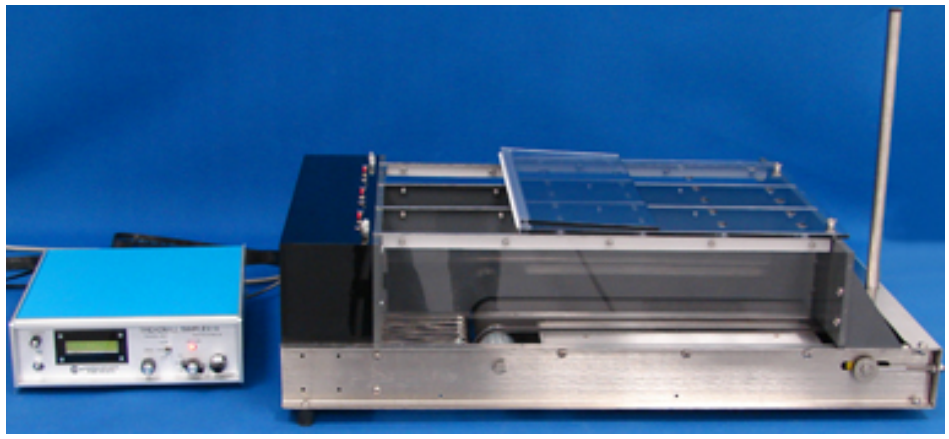
Columbus Instruments

A Columbus Instruments possui esteira ergométrica reversível para estudos em RATOS e CAMUNDONGOS. Opções com e sem choque, autocalibrarão, interface com computador, inclinação, detecção, software, etc.



Columbus Instruments





Exer-3/6, currently in its 3rd generation, is a general purpose three (rats) or six (mice) lane animal exerciser utilizing single belt construction with dividing walls suspended over the tread surface. Exer-3/6 can be supplied with or without a stimulus assembly. An electrical stimulus system option is composed of three or six shock grids, each with individual on/off switches. Stimulus intensity is adjustable and LED lamps indicate which stimulus grid is active. Design of electrical stimulus grid reflects special attention to avoid injuries to animals. Animals are exercised in three or six compartments made of durable plastic (clear Lexan or opaque PVC). For some applications, users may choose to purchase Exer-3/6 with a single large compartment. An included drive motor controller provides smooth and continuous adjustment of speed in the range 3-100 m/m. The exercising belt is made with special material that facilitates the animals' grip and is easy to clean.

Software included, provides remote control over the treadmill and settings for speed and acceleration, records distance traveled and data is saved in CSV format for Excel or similar statistical software.
